1989 FUEL CONSUMPTION GUIDE

Ratings for new cars, light trucks and vans

GUIDE DE CONSOMMATION DE CARBURANT 1989

Cotes pour automobiles, camionnettes et fourgonnettes neuves

Canada

INTRODUCTION

This guide has been prepared to assist you in purchasing the most fuel-efficient new vehicle for your needs.

With such a vehicle, you save many litres of fuel over the lifetime of your car and your purchase becomes an important part of the national effort to conserve Canada's energy resources.

NOTE: The fuel consumption ratings for 1986 and later models have been adjusted to bring the laboratory test results more in line with the general driving experience. Therefore, the fuel consumption ratings in this guide are not directly comparable to the ratings published prior to 1986. Also, the mathematically-derived combined fuel consumption rating will no longer be published after the 1988 model year. Consumers should now compare different models on their city or highway ratings.

INTRODUCTION

Le choix d'une nouvelle voiture influera sur l'effort collectif entrepris pour sauvegarder les ressources énergétiques de la nation.

Une voiture qui consomme peu vous fera économiser beaucoup de carburant. Cette brochure vous guidera dans l'achat d'un véhicule qui, tout en répondant à vos besoins, a le meilleur rendement énergétique.

NOTA: Dans cette édition, les cotes de consommation des modèles de 1986 et ultérieurs ont été ajustées afin que les résultats des essais en laboratoire correspondent davantage aux habitudes de conduite du grand public, et elles ne peuvent donc pas être directement comparées à celles qui ont paru avant 1986. En outre, pour les modèles ultérieurs à 1988, la cote combinée, obtenue par une formule mathématique, ne sera plus publiée. À l'avenir, les consommateurs devront comparer les différents modèles en se fondant sur la cote de ville ou routière.

Camionnettes listées alphabétiquement par fabricant 24

Fourgonnettes listées alphabétiquement par fabricant 29

Véhicules à usages spéciaux listés alphabétiquement par fabricant 32

SOURCES OF THE DATA

The fuel consumption ratings in this guide were submitted to Transport Canada by the vehicle manufacturers who have certified that the tests and calculations were carried out according to approved Transport Canada test methods.

New vehicles are "run-in" for about 6,000 km, then mounted on a laboratory chassis dynamometer and run through simulated city and highway courses. This method of testing is used instead of on-the-road testing because all test conditions can be carefully controlled, thus ensuring that all vehicles are tested under identical conditions.

The fuel consumption of your vehicle will vary depending on how you drive, the season, the types of optional equipment installed, and the condition of your vehicle. See the section "Factors Affecting Fuel Consumption" for more detailed information on how your fuel consumption may be affected.

NOTE: Four-wheel-drive vehicles are tested in the two-wheel-drive mode.

Vehicles not listed in this guide either did not meet the publication deadline or exceeded the light-duty gross vehicle weight limit of 3,855 kilograms (8,500 pounds). Consult individual dealers for information.

UNDERSTANDING THE TABLES

Engine Size
Refers to combustion chamber displacement and is measured in litres.

Cylinders
Indicates the number of engine cylinders or the number of rotors in a rotary engine (R2).

High Output
Indicates that this vehicle is equipped with an optional engine which provides more power than the standard engine of the same size.

* **City**
The city ratings are based on a 12 km drive of 22 minutes which includes 16 complete stops. The average speed of the test is 32 km/h which includes time spent at the stops. **Winter fuel consumption, especially for city driving, will be significantly greater than the ratings show.**

* **Highway**
The highway ratings are based on a 16 km trip of 12 minutes with no stops. The average speed of the test is 77 km/h.

* The tables present fuel consumption ratings that should be obtainable with moderate driving in good summer conditions on level, paved roads. For your convenience, both litres-per-100 kilometres (L/100 km) and miles-per-imperial gallon (MPG) are presented.

SOURCES DES DONNÉES

Les constructeurs ont fourni à Transports Canada les cotes de consommation de carburant qui figurent dans le présent guide. Ils ont attesté avoir effectué les essais et les calculs selon les méthodes approuvées par le Ministère.

Après un rodage d'environ 6 000 km, les véhicules sont installés sur un dynamomètre à châssis en laboratoire, qui simule des trajets en ville et sur route. Cette méthode a un net avantage sur les essais sur route: elle permet de soumettre tous les véhicules à des conditions d'essai identiques, rigoureusement contrôlées.

La consommation de carburant varie selon votre façon de conduire, la saison, les accessoires facultatifs et l'état de votre véhicule. Pour en savoir plus long sur les facteurs qui peuvent influer sur la consommation, consultez la section qui leur est consacrée.

NOTA: Les véhicules à quatre roues motrices subissent les essais dans la position deux roues motrices.

Certains véhicules ne figurent pas ci-dessous, parce que les renseignements nous sont parvenus trop tard, ou parce que le poids nominal brut du véhicule dépassait 3 855 kilogrammes (8 500 livres). Consultez le concessionnaire pour plus d'information.

EXPLICATION DES TABLEAUX

Cylindrée
Volume total de la chambre de combustion, exprimé en litres.

Cylindres
Nombre de cylindres du moteur ou nombre de rotors d'un moteur rotatif (R2).

Grand rendement
Le véhicule est équipé d'un moteur optionnel développant plus de puissance que le moteur de série de même cylindrée.

* **Ville**
Les cotes de ville sont fondées sur un parcours de 12 km, effectué en 22 minutes et comprenant 16 arrêts complets. La vitesse moyenne pendant l'essai, y compris les temps d'arrêt, est de 32 km/h. **En hiver, la consommation sera nettement plus élevée que les cotes indiquées, particulièrement en ville.**

* **Routière**
Les cotes de consommation routière sont fondées sur un parcours de 16 km effectué en 12 minutes, sans aucun arrêt, à vitesse moyenne de 77 km/h.

* Les tableaux donnent les cotes de consommation en carburant correspondant, pendant l'essai, à une conduite à une vitesse modérée par beau temps d'été, sur routes nivelées et pavées. Par souci de facilité, les cotes sont indiquées en litres aux 100 km (l/100 km) et en milles au gallon impérial (mpg).

FACTORS AFFECTING FUEL CONSUMPTION

The fuel consumption of your vehicle will vary depending on when and how you drive, on the types of optional equipment installed, and on the condition of your vehicle. The influence of various factors is described below.

Vehicle Condition

A poorly maintained vehicle typically consumes up to 15% more fuel. Three common causes of high fuel consumption are: (a) low tire pressures, (b) retarded spark timing or misfiring, and (c) overly rich idle mixture for carburetor-equipped vehicles.

Incorrect wheel alignment and brake drag should also be checked when high fuel consumption is experienced.

Temperature

City tests in low temperature laboratories show that at 0°C, consumption is increased about 8% while at −30°C, consumption is increased by an average 30%. When the effects of low temperatures are combined with short trips and excessive idling to warm the engine, fuel consumption in winter can be 50% greater than summer.

Speed

Most cars use about 20% more fuel if driven at 110 km/h instead of 90 km/h.

Road Condition

Rough asphalt, pot-holes and gravel-surfaced roads can increase fuel consumption up to 35%.

Driving in snow increases fuel consumption because snow increases wheel slippage and resistance to vehicle motion.

Wet roads can cause up to a 10% increase in fuel consumption due to increased rolling resistance.

Driving into a 30 km/h headwind has almost the same effect as increasing speed by the same amount.

Driving Style

Tests have shown conclusively that different drivers using the same vehicle over the same road and weather conditions experience up to 20% variation in fuel consumption.

Starting a cold engine and taking short trips (less than 5 km), whether winter or summer, will cause very high fuel consumption.

FACTEURS INFLUANT SUR LA CONSOMMATION DE CARBURANT

La consommation de carburant varie selon votre façon de conduire, la saison, les accessoires facultatifs et l'état de votre véhicule. Vous trouverez ci-dessous une description de divers facteurs et de leurs effets.

État du véhicule

Un véhicule mal entretenu occasionne une consommation de 15% supérieure à la normale. Des pneus insuffisamment gonflés, un retard à l'allumage ou des ratés et une carburation trop riche au ralenti, pour les véhicules équipés d'un carburateur, sont fréquemment la cause d'une consommation élevée de carburant.

Lorsque la consommation est exagérée, il faut aussi vérifier le parallélisme des roues et le frottement des freins.

Température

Les essais de conduite en ville indiquent qu'à une température de 0°C, la consommation de carburant s'accroît d'environ 8%, et qu'à −30°C, elle augmente en moyenne de 30%. Si, en outre, vous ne faites que de courts trajets et si vous laissez tourner le moteur au ralenti trop longtemps pour le faire chauffer, vous pouvez consommer deux fois plus de carburant en hiver qu'en été.

Vitesse

À 110 km/h, la plupart des véhicules consomment environ 20% plus qu'à 90 km/h.

État de la chaussée

L'asphalte déformé, les nids-de-poule et les routes de gravier peuvent parfois faire augmenter la consommation de 35%.

La neige accroît la consommation d'essence parce qu'elle fait patiner les roues davantage et augmente la résistance au roulement.

Sur chaussée mouillée, la consommation peut augmenter jusqu'à 10% à cause d'une plus forte résistance au roulement.

Un vent contraire de 30 km/h correspond presqu'à une augmentention égale de la vitesse du véhicule.

Style de conduite

Les essais démontrent de façon concluante que la consommation de carburant d'un même véhicule peut varier jusqu'à 20% selon le conducteur, même dans des conditions routières et météorologiques identiques.

Des démarrages à froid et de courts trajets (moins de 5 km) entraînent une très forte consommation de carburant, en été comme en hiver.

Optional Equipment

Options such as radial tires, block heaters and cruise control tend to lower fuel consumption, while options that increase weight and electrical or aerodynamic resistance will increase consumption. Optional axle ratios and tire sizes also affect fuel consumption. Your dealer can provide details on the use of optional equipment.

THE FUEL CONSUMPTION LABELLING PROGRAM

Most manufacturers are voluntarily affixing a fuel consumption label to each new vehicle. These labels vary in format but should indicate the city and highway fuel consumption for that particular model.

The labels are intended to remain on new vehicles until they are sold. If there is no label, you should request the dealer to provide the manufacturer's approved fuel consumption estimate for that vehicle.

THE CAR ECONOMY BOOK

If you wish more information on how to buy, drive and maintain your car to save money and energy, you can obtain, "The Car Economy Book", published by Energy, Mines and Resources Canada, free of charge by writing to:

Energy, Mines and Resources Canada
Communications Branch
580 Booth Street
Ottawa, Ontario
K1A 0E4

Accessoires facultatifs

Les accessoires tels que les pneus radiaux, les chauffe-blocs et les régulateurs automatiques de vitesse tendent à réduire la consommation, tandis que les accessoires qui réduisent le profil aérodynamique, alourdissent le véhicule ou consomment plus d'électricité, accroissent la consommation de carburant. Celle-ci est également modifiée par les rapports de pont et la grosseur des pneus facultatifs. Votre concessionnaire peut vous donner plus de renseignements sur l'utilisation des accessoires facultatifs.

PROGRAMME D'AFFICHAGE DE LA CONSOMMATION DE CARBURANT

La plupart des constructeurs apposent volontairement une étiquette de consommation de carburant sur chaque véhicule neuf. Le format des étiquettes varie, mais chacune devrait indiquer la consommation de carburant en ville et sur route du modèle.

Les étiquettes ne doivent pas être retirées avant que le véhicule neuf soit vendu. Si vous ne trouvez pas l'étiquette, demandez au concessionnaire quelle est la consommation de carburant (d'après le fabricant) du véhicule qui vous intéresse.

LE GUIDE DES ÉCONOMIES AU VOLANT

Si vous désirez obtenir plus de renseignements sur la façon d'acheter, de conduire et d'entretenir votre voiture pour économiser de l'argent et de l'énergie, vous pouvez obtenir gratuitement le Guide des économies au volant, publié par Énergie, Mines et Ressources Canada, en faisant la demande au service suivant:
